SUBJECT INDEX

Analysis of holographic interferograms for nondestructive testing, computer, 222
Analysis software system, an interactive scene, 158
Angle measures in pattern recognition, using, 114
Application to photointerpretation and medical diagnosis, model-driven vision using procedure description: motivation and, 144
(The) Application of quantitative image processing to the manufacturing of advanced composite structures, 66
Applications, a charge-coupled device image processor for smart sensor, 15
Applications, simulation and preliminary performance characteristics of a computed tomography device for industrial, 178
Applications, three dimensional picture processing and its use in bio-medical, 19
Arrays, numerical hydrodynamics data from digital image, 191
Arrays, tomographical properties of uniformly redundant, 228
Artillery shell radiographs, automatic inspection of, 214
Austenitic stainless steel welds, recent advances in feature extraction techniques being developed for ultrasonic examination of, 232
Automated cartography, recognition of handprinted characters for, 56
Automated edge match system, a second generation, 40
Automated recognition system for industrial quality assurance, 78
Automatic inspection of artillery shell radiographs, 214
Automatic visual inspection of printed circuit boards, 199

Best fit edge detection for meteorological data, 8
Bio-medical applications, three dimensional picture processing and its use in, 91
Biomedical image processing and understanding, 103
Boards, automatic visual inspection of printed circuit, 199

Cartographic, scanning, vectorizing & editing system, a unique, 2
Cartography, recognition of handprinted characters for automated, 56
Characters for automated cartography, recognition of handprinted, 56
(A) Charge-coupled device image processor for smart sensor applications, 15
Circuit boards, automatic visual inspection of printed, 199
Classification of targets in FLIR imagery, segmentation and, 83
Clustering, the location and orientation of noisy discontinuities by constrained, 31
Complex industrial parts, a visual system for, 248
Composite structures, the application of quantitative image processing to the manufacturing of advanced, 66
Computed tomography device for industrial applications, simulation and preliminary performance characteristics of a, 178
Computer analysis of holographic interferograms for nondestructive testing, 222
Computer-controlled manipulator with visual inputs, 184
Computer which learns by example, an image processing, 120
Constrained clustering, the location and orientation of noisy discontinuities by, 31
Content, a measure of scene, 127

Data, best fit edge detection for meteorological, 8
Data from digital image arrays, numerical hydrodynamics, 191
Detection for meteorological data, best fit edge, 8
Detection in noisy imagery, real-time edge, 23
Device for industrial applications, simulation and preliminary performance characteristics of a computed tomography, 178
Diagnosis, model-driven vision using procedure description: motivation and application to photointerpretation and medical, 144
Digital image arrays, numerical hydrodynamics data from, 191
Dimensional picture processing and its use in bio-medical applications, three, 91
Discontinuities by constrained clustering, the location and orientation of noisy, 31

Edge detection for meteorological data, best fit, 8
Edge detection in noisy imagery, real-time, 23
Edge match system, a second generation automated, 40
Editing system, a unique cartographic, scanning, vectorizing &, 2
Effects, light source, 50
Examination of austenitic stainless steel welds, recent advances in feature extraction techniques being developed for ultrasonic, 232
Example, an image processing computer which learns by, 120
Extraction techniques being developed for ultrasonic examination of austenitic stainless steel welds, recent advances in feature, 232

FLIR imagery, segmentation and classification of targets in, 83

Generation automated edge match system, a second, 40

Handprinted characters for automated cartography, recognition, 56
Holographic interferograms for nondestructive testing, computer analysis of, 222
Hydrodynamics data from digital image arrays, numerical, 191

Image arrays, numerical hydrodynamics data from digital, 191
Image intensity, photometric stereo: a reflectance map technique for determining surface orientation from, 136
(An) Image processing computer which learns by example, 120
Image processing to the manufacturing of advanced composite structures, the application of quantitative, 66
Image processing and understanding, biomedical, 103
Image processing, using microprocessors for, 241
Image processor for smart sensor applications, a charge-coupled device, 15
Imagery, real-time edge detection in noisy, 23
Imagery, segmentation and classification of targets in FLIR, 83
Images, measurement of sea surface temperature from the meteorological satellite (NOAA), 169
Industrial applications, simulation and preliminary performance characteristics of a computed tomography device for, 178
Industrial parts, a visual system for complex, 248

Industrial quality assurance, automated recognition system for, 78
Inputs, computer-controlled manipulator with visual, 184
Inspection of artillery shell radiographs, automatic, 214
Inspection of printed circuit boards, automatic visual, 199
(An) Interactive scene analysis software system, 158
Interferograms for nondestructive testing, computer analysis of holographic, 222

Light source effects, 50
(The) Location and orientation of noisy discontinuities by constrained clustering, 31

Manipulator with visual inputs, computer-controlled, 184
Manufacturing of advanced composite structures, the application of quantitative image processing to the, 66
Map technique for determining surface orientation from image intensity, photometric stereo: a reflectance, 136
Match system, a second generation automated edge, 40
(A) Measure of scene content, 127
Measurement of sea surface temperature from the meteorological satellite (NOAA) images, 169
Measures in pattern recognition, using angle, 114
-Medical applications, three dimensional picture processing and its use in bio, 91
Medical diagnosis, model-driven vision using procedure description: motivation and application to photointerpretation and, 144
Meteorological data, best fit edge detection for, 8
Meteorological satellite (NOAA) images, measurement of sea surface temperature from the, 169
Model-driven vision using procedure description: motivation and application to photointerpretation and medical diagnosis, 144
Motivation and application to photointerpretation and medical diagnosis, model-driven vision using procedure description:, 144

(NOAA) images, measurement of sea surface temperature from the meteorological satellite, 169
Noisy discontinuities by constrained clustering, the location and orientation of, 31
Noisy imagery, real-time edge detection in, 23
Nondestructive testing, computer analysis of hologjraphic interferograms for, 222
Numerical hydrodynamics data from digital image arrays, 191

Orientation of noisy discontinuities by constrained clustering, the location and, 31

Parts, a visual system for complex industrial, 248
Pattern recognition, using angle measures in, 114
Performance characteristics of a computed tomography device for industrial applications, simulation and preliminary, 178
Photointerpretation and medical diagnosis, model-driven vision using procedure description: motivation and application to, 144
Photometric stereo: a reflectance map technique for determining surface orientation from image intensity, 136
Picture processing and its use in bio-medical applications, three dimensional, 91
Printed circuit boards, automatic visual inspection of, 199
Processing computer which learns by example, an image, 120
Processing and its use in bio-medical applications, three dimensional picture, 91
Processing to the manufacturing of advanced composite structures, the application of quantitative image, 66
Processing and understanding, biomedical image, 103
Processing, using microprocessors for image, 241
Processor for smart sensor applications, a charge-coupled device image, 15
Properties of uniformly redundant arrays, tomographical, 228

Quality assurance, automated recognition system for industrial, 78
Quantitative image processing to the manufacturing of advanced composite structures, the application of, 66

Radiographs, automatic inspection of artillery shell, 214
Real-time edge detection in noisy imagery, 23
Recent advances in feature extraction techniques being developed for ultrasonic examination of austenitic stainless steel welds, 232
Recognition of handprinted characters for automated cartography, 56
Recognition system for industrial quality assurance, automated, 78
Recognition, using angle measures in pattern, 114
Reflectance map technique for determining surface orientation from image intensity, photometric stereo: a, 136

Satellite (NOAA) images, measurement of sea surface temperature from the meteorological, 169
Scanning, vectorizing & editing system, a unique, cartographic, 2
Scene analysis software system, an interactive, 158
Scene content, a measure of, 127
Sea surface temperature from the meteorological satellite (NOAA) images, measurement of, 169
(A) Second generation automated edge match system, 40
Segmentation and classification of targets in FLIR imagery, 83
Sensor applications, a charge-coupled device image processor for smart, 15
Shell radiographs, automated inspection of artillery, 214
Simulation and preliminary performance characteristics of a computed tomography device for industrial applications, 178
Software system, an interactive scene analysis, 158
Source effects, light, 50
Stainless steel welds, recent advances in feature extraction techniques being developed for ultrasonic examination of austenitic, 232
Stereo: a reflectance map technique for determining surface orientation from image intensity, photometric, 136
Structures, the application of quantitative image processing to the manufacturing of advanced composite, 66
Surface orientation from image intensity, photometric stereo: a reflectance map technique for determining, 136
Surface temperature from the meteorological satellite (NOAA) images, measurement of sea, 169

System for complex industrial parts, a visual, 248
System for industrial quality assurance, automated recognition, 78
System, an interactive scene analysis software, 158
System, a second generation automated edge match, 40
System, a unique, cartographic, scanning, vectorizing & editing, 2

Targets in FLIR imagery, segmentation and classification of, 83
Technique for determining surface orientation from image intensity, photometric stereo: a reflectance map, 136
Techniques being developed for ultrasonic examination of austenitic stainless steel welds, recent advances in feature extraction, 232
Temperature from the meteorological satellite (NOAA) images, measurement of sea surface, 169
Testing, computer analysis of holographic interferograms for non-destructive, 222
Three dimensional picture processing and its use in bio-medical applications, 91
Tomographical properties of uniformly redundant arrays, 228
Tomography device for industrial applications, simulation and preliminary performance characteristics of a computed, 178

Ultrasonic examination of austenitic stainless steel welds, recent advances in feature extraction techniques being developed for, 232
Understanding, biomedical image processing and, 103
(A) Unique, cartographic, scanning, vectorizing & editing system, 2
Using angle measures in pattern recognition, 114
Using microprocessors for image processing, 241

Vectorizing & editing system, a unique, cartographic, scanning, 2
Vision using procedure description: motivation and application to photointerpretation and medical diagnosis, model-driven, 144
Visual inputs, computer-controlled manipulator with, 184
Visual inspection of printed circuit boards, automatic, 199
(A) Visual system for complex industrial parts, 248

Welds, recent advances in feature extraction techniques being developed for ultrasonic examination of austenitic stainless steel, 232
